

For the final project you will select an automated process of your choice and fully design the system as you did in Project 1. All instructions from the course must be used in your system to demonstrate your understanding of the instructions and their uses.

As you will be using subroutines, you should demonstrate each subroutine on the lab stations. For the lab to be considered fully demonstrated, you will demo to the TA's:

- Subsystem 1
- Subsystem 2
- Subsystem 3
- Moving from the main routine to different subroutines.

A. Industry:

B. Description of the process:

C. Section 1:

D. Section 2:

E. Section 3:
